Manual, CREST-accredited

Penetration testing

Led by senior testers, with a free retest.

We test web applications, APIs, mobile apps, networks, cloud and AI systems by hand, then give you a report your engineers can act on and evidence your auditors will accept.

What we test and how

What we test

Web applications	APIs	Mobile apps
External networks	Internal networks	AWS and GCP
AI and LLM systems	Social engineering	Red team exercises

How a test runs

1 Scope → 2 Plan → 3 Test → 4 Report → 5 Retest

Manual testing by senior testers

Every test is led by testers holding CREST CRT or CCT. The work is never passed to juniors or subcontracted.

One report for engineers, one for the board

A technical report with reproduction steps and CVSS ratings, plus a one to two page summary for the board.

A free retest

We retest what you have fixed and issue a confirmation letter you can give to auditors and customers.

Engagement options

Single test

For a release or an audit

- Fixed scope and fixed fee
- Technical and executive reports
- Free retest of your fixes

Testing as a service

If you ship every week

- Subscription or on demand
- Findings shared as confirmed
- Retests built in

Compliance testing

If an auditor needs the evidence

- PCI DSS Requirement 11.4
- SOC 2, ISO 27001 and DORA
- Evidence letter for your auditor

Why RedSecLabs

- CREST member company
- Testers hold CREST CRT or CCT
- Fixed-scope quote within one working day
- Testing can start within one to two weeks

What you receive

- Test plan and signed rules of engagement
- Technical report with reproduction steps
- Board summary of one to two pages
- Retest and confirmation letter

Book a 30-minute scoping call

We will send a fixed-scope quote within one working day and agree a firm timeline before work starts.
