

Your SWIFT CSP attestation is due

31 December 2026

Most engagements take 6 to 10 weeks.

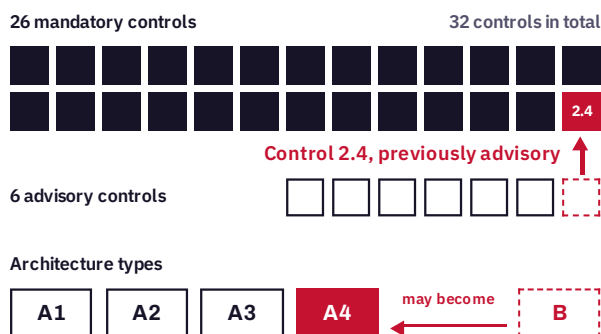

CSCF v2026 makes Control 2.4 mandatory and brings customer connectors into scope. RedSecLabs is a listed SWIFT CSP assessment provider and can carry out the independent assessment your attestation needs.

Working back from the deadline

KYC-SA attestation window: 1 July to 31 December 2026

What has changed in CSCF v2026

Control 2.4 is now mandatory

Back-office data flow security is no longer advisory. You will need to evidence confidentiality, integrity and mutual authentication.

Customer connectors are now in scope

If you attested as Type B before, the wider connector definition may make you Type A4, which brings more controls into scope.

An independent assessment is required

Since 2021 every attestation has had to be backed by an independent assessment. Correspondent banks also review the result.

Engagement options

Gap assessment

If you need to know where you stand

- Architecture type confirmed first
- Control-by-control gap register
- Remediation plan, owners and dates

Gap + independent assessment

Our most chosen option

- Everything in the gap assessment
- Then the independent assessment
- Remediated controls re-verified

Assessment only

If you have already remediated

- Fieldwork fitted around your teams
- Counterparty-ready report
- Support through KYC-SA attestation

Why RedSecLabs

- Listed SWIFT CSP assessment provider
- A senior assessor leads every engagement
- Fixed fee and timeline agreed at scoping
- CREST member and PCI SSC QSA Company

Regulator coordination where required

United Kingdom
PRA, FCA

UAE
CBUAE, DFSA, FSRA

Saudi Arabia
SAMA

Qatar
QCB, QFCRA

Kuwait
CBK

Bahrain
CBB

Book a 30-minute scoping call

We will send a fixed-scope quote within one working day and agree a firm timeline before work starts.
